

Date:

Wednesday Challenge Form

Group Members: The entire class

Problem Statement: Create a structure out of PVC pipe by giving directions to a blindfolded partner. The person giving directions is not allowed to touch the blindfolded partner or the PVC pipes.

Approach: There was no real classroom wide approach; we all just did what we felt like. In the case of myself, I made sure to give directions to my partner that were in relation to his body— for example, if I wanted him to pick something up, I told him that it was X inches away from whatever body part.

Solution: We didn't finish the challenge because we ran out of time.

Lessons Learned: Work faster and stop screwing around.
