

## Wednesday Challenge Form

Group Members: Alvin, Erin, Hunter

**Problem Statement:** Using the materials provided in a plastic bag, build a device that can move a golf ball from one brown paper bag to another without the user touching the bag itself.

**Approach:** Since Hunter was in last year's winning group, after fooling around for a bit, we just copied the winning design from last year.

**Solution:** We won, with a time of 20 seconds.

**Lessons Learned:** Don't change what is already good.
